

PIECEWORK PAYROLL PROCESSING

for Microsoft Dynamics GP

Overview

Piecework payroll processing provides additional payroll options outside of traditional hourly or salary pay inside Microsoft Dynamics GP. By utilizing a piecework payroll processing solution, employers can easily pay employees based on the completion of projects or tasks, rather than by hour or salary. This can be beneficial when employing disabled individuals or anyone with barriers to employment that cannot perform duties at a standard pace and require piece rate pay.

With our feature-rich addon for Dynamics GP, Rehabilitation Services and Vocational Payroll, you can create jobs and tasks, calculate time studies based on prevailing wage, and pay using piece rate. Track additional employee information such as medications, transportation options, medical conditions, and more inside Dynamics GP. This fully customizable payroll solution allows you to manage and pay employees that traditionally require additional manual work.

Features & Benefits

1

Automatically calculate piece rate for non-hourly and non-salary wage earners.

2

Set up time studies and access prevailing wage information.

3

Track critical employee information such as emergency contacts, caseworkers, medical conditions, and more.

4

Save time and reduce manual errors by processing piecework payroll in Dynamics GP Payroll module.

5

Leverage sophisticated reporting such as Job Resource, Client Progress, Activity Details and Consumer Proficiency.
